

Parallel and Perpendicular Lines worksheet

Parallel - no matter how much you extended them longer), they would still never touch each other

Perpendicular - at a right angle to each other

Oblique - neither parallel nor perpendicular to

Below are a set of lines, each labelled with a letter. Look at each set of lines and say whether they are parallel, perpendicular or oblique.

To access the complete parallel and perpendicular lines worksheet, with 9 pairs of lines to identify, (including answers)
