Partitioning numbers in different ways lesson plan

| DAY | We Are Learning To (WALT): | MODEL / INTRODUCTION | INDEPENDENT WORK | PLENARY |
| :---: | :---: | :---: | :---: | :---: |
|  | Mental: <br> Main: <br> Partition numbers in different ways | Mental: <br> Main: <br> TA to ask $G+T$ children to partition some 4-digit numbers; if confident with this go with TA to work on partitioning numbers with a decimal place; if not stay with the rest of the class Have TA take $\mathrm{G}+\mathrm{T}$ children to work on partitioning numbers with a decimal place: <br> Show children a stick of ten: <br> Show children another version of it: <br> Revise how each unit can be split in to tenths <br> Give each child a unit that has been split in to tenths and have them cut it up in to ten strips. Revise how each of these is called a tenth, so a unit is made up of ten tenths Show children some examples of numbers, representing them using these units squares and tenths strips e.g. 3.2 would be 3 unit squares and 2 tenth strips, 8.9 would be 8 unit squares and 9 tenth strips etc <br> Model how to partition numbers with one decimal place in different ways <br> Ask the children to show you some ways of partitioning numbers with a decimal place (Teacher with remainder of class) <br> Revise how columns in 2-digit numbers are tens and units and columns in 3-digit numbers are hundreds, tens and units <br> Use Place Value ITP at http://www.taw.org.uk/lic/itp/place val.html (if link does not work, just Google 'Place Value ITP') to show how a number in the tens column is worth ten times as many as a number in the units column e.g. a 1 in the tens column is worth 10 , whereas a 1 in the units column is worth only 1 . Repeat to show how a number in the hundreds column is worth ten times as many as a number in the tens column e.g. the 1 in 100 is worth ten lots of ten <br> Model how we can partition numbers in different ways e.g. $43=40+3$ or $40+2+1$ or $20+$ $20+3$ etc <br> Repeat above model for 3 and 4-digit numbers as well | Lower ability partition numbers up to 20 <br> Middle ability partition 2-digit numbers <br> Higher ability partition 3-digit numbers <br> G+T - partition 4-digit <br> numbers and numbers with 1 decimal place <br> Extension make up own numbers to partition in different ways on pupil whiteboards | Ask children to come up with some of their own numbers and partition them in more than one way on their pupil whiteboards . Explain what they have done to a partner |
