

Task Planner for Column Subtraction

Step	What to do	How it should look (for $282 - 57$)	✓
1	Write the first number (one digit in each box).		
2	Write the other number underneath. (Make sure you put units under units, tens under tens and so on).		
3	Write the - symbol.		
4	Draw a line underneath for an 'equals' sign.		
5	Start subtracting from the right-hand side (If a bottom number is more than a top number, you need to 'borrow'. Don't forget to write the new number in the column you borrowed from)	<p>Start here</p> 	
6	Keep going until you have subtracted all of the columns
